

Build Project Intelligence: Assure Success

Setting you up for the future with Pelicam's full day active learning workshop

The Challenge:

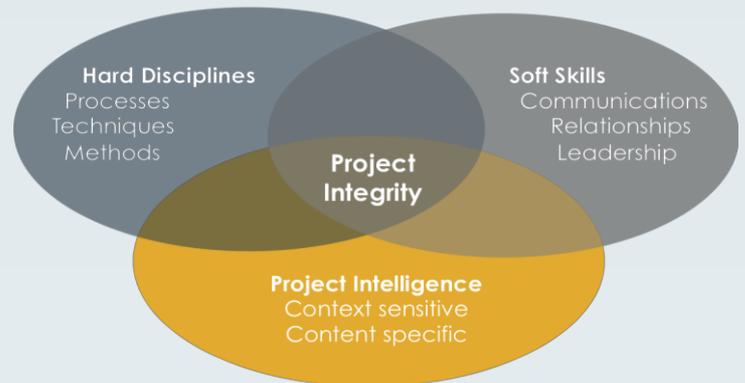

In the UK, over two thirds of projects and programmes fail to deliver to time, cost and quality and don't achieve their business case.* The complexity of "programme vs. project" is not always appreciated and the path to success is fraught with danger. **(Standish Group)*

The Solution:

External, independent assurance remains a defining critical success factor and relies on a combination of skill, instinct and experience. Our interactive full day workshop focuses on the "when, how, why and what" it takes to assure a project or programme. The workshop is facilitated by an experienced Pelicam practitioner with a pragmatic, insightful and provocative approach. Coaching on the go, he will introduce new tools and techniques for practical application in project or programme assurance roles, and demonstrate how to raise influence across the whole organisation.

Objectives:

See through the "project noise" and identify the essential ingredients and critical actions for setting a project or programme up for success.

Who Will Benefit?

Assurance specialists who:

1. want to keep up to date with best practice
2. can pragmatically apply experience
3. aspire to ensure projects and programmes will successfully deliver

Workshop Content:

- Success criteria and serial killers
- Aligning business need to capability
- Managing scope and complexity
- Why, when and how to measure benefits
- Managing stakeholders in complex organisations and cultures
- The challenges of change
- Clarifying governance and controls
- Comprehensive, consistent planning
- Customer/supplier relationships
- Recognising a high-performing team

Pelicam workshops work effectively alongside PRINCE2, MSP, APM, PMP and CMMI qualifications.
